HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

REASONS FOR ALLOWANCE

Claim 97 is allowable. The restriction requirement as set forth in the Office action mailed on 6/10/09, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 100, 103, and 104, directed to specific embodiments of the signal transmitter, are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Claims 81-117 are allowed. The following is an examiner's statement of reasons for allowance:

The use of computerized control/monitor systems is well known in the art of medical treatment. These systems allow for pertinent data to be displayed and allow a technician to enter commands to control the operation of the treatment device. Applicant claims a medical treatment device comprising two parts: a treatment unit having user-accessible controls that performs the medical treatment, and a monitor unit that processes treatment data from the treatment unit. This type of configuration is well known in the art (see, for example, Fletcher-Haynes et al. - US 2001/0034614).

The prior art, however, does not teach or suggest the use of a one-way communication channel between the treatment unit and the monitor unit, such that the monitor unit is completely prevented from sending signals to the treatment unit at all times while the treatment device is allowed to send signals to the monitor unit. This configuration allows the treatment unit to function on its own, such that it continues to function even if the monitor unit malfunctions. Any malfunction of the monitoring device (which has complex software in order to process the data that is received) is therefore completely prevented from affecting the operation of the treatment device.

Regarding the one-way communication channel, the closest prior art of record is Tsonglin (US 5,469,859) teaches a medical monitoring device for measuring physiological parameters. The device comprises measuring units (61, 64) that send data to a microcontroller 65. Data is then transmitted through a one-way communication channel 67 from the measuring unit to the monitoring unit. The one-way communication channel is established by using an opto-isolator. This arrangement provides a one-way communication path for the purpose of preventing random voltages

from harming the patient (Column 12, Lines 11-27). Tsonglin does not teach a true one way communication flow path from the measuring unit to the monitoring unit because other flow paths exist between the monitoring unit and the measuring unit (see Figure 2B. Therefore, Tsonglin does not teach or suggest the claimed one-way communication flow path.

Further, even if Tsonglin taught the claimed one-way communication channel, it could not reasonably be combined with Fletcher-Haynes' treatment system. Fletcher-Haynes' device relies extensively on two-way communication between the monitor/controller and the treatment units. Taking away said two-way functionality would destroy the intended function of Fletcher-Haynes' treatment system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
